

GAMAJET: ROUGHNECK OF THE YEAR

**NO SICK TIME- NO INJURIES
NO WAGES - NO BREAKS
JUST 24/7/365 CLEANING
100% OF THE TANK, EVERY
TIME.**

75% FASTER, GUARANTEED.

We can explain how you can eliminate confined space entry when cleaning your tanks and trucks with a Gamajet tank cleaning machine, and how to reduce cleaning time by 75%, What we can't explain... is why you don't.

Directional Units available to focus the cleaning power on the tougher spots

AS THE EXPERTS, IF YOU HAVE A TANK TO CLEAN, WE HAVE A WAY TO DO IT!

See the before and after cleaning power of Gamajet. Just 15 minutes after insertion

When it comes to tank cleaning there are a two options. You can manually clean your tank or you can use a Gamajet. Here is the difference:

MANUAL CLEANING

The death rate on oil rigs is eight times the national occupational average. As an already dangerous job, why risk it even more by putting your crew *inside* tanks, in order to clean? With regulations pushing rigs to provide a safer environment, there is a demand for ZERO ENTRY processes.

Tanks must be thoroughly cleaned before new product is placed within them or prior to moving/storing/returning. When done manually, the cleaning of tank interiors can take between 8-24+ hours. In addition, confined space entry protocol requires two-three man teams resulting in a total of 16-72+ man hours per tank.

The interior of many tanks are not only hazardous, but extremely uncomfortable. Before the tank is completely cleaned, workers often rush to get out, leaving residue in many different locations. This hidden residue can result in very costly contamination.

GAMAJET

The Gamajet is dynamically balanced and can be lowered into any tank on a flexible hose or lance. It may also be placed on a cart or tripod within the vessel, or permanently installed.

How it works: Once in position the fluid-driven machine combines pressure and flow to create two high impact cleaning jets. These jets scour the entire tank interior in a concise global indexing pattern, blasting residue from the surface.

Every tank cleaning application is evaluated by a Gamajet Tank Cleaning Expert, who then sizes and tailors a Gamajet Tank Cleaning Machine for the application. This machine is guaranteed not only to clean the tank, but to do so with **the most efficient use of resources; including time, water, and chemicals.** Most tank cleaning can be accomplished with a Gamajet in 20-40 minutes.
